

Playwright Capstone Project Plan

nopCommerce Demo Store - QA Automation Framework

Project Information

- Project Name: nopCommerce Demo Store Automation
- Domain: E-Commerce Testing
- Automation Tool: Playwright
- Programming Language: JavaScript
- Framework: Playwright Test Runner

Project Goal

- Automate major user workflows of the nopCommerce demo store using Playwright and validate critical frontend functionalities.

Website Details

- Website URL: <https://demo.nopcommerce.com/>

Service-Wise Test Case Distribution

- 1. Authentication Management – Login, logout, invalid login, forgot password, session validations.
- 2. Product Management – Product search, category filters, product sorting, product details validation.
- 3. Cart Management – Add/remove products, quantity update, cart persistence, cart validations.
- 4. Checkout & Payment Flow – Checkout process, address management, payment validations, order confirmation.
- 5. Compare & Order Management – Product comparison, order placement, order history, invoice validation.
- 6. Navigation & UI Validation – Header/footer links, navigation menus, banners, responsive validations.
- 7. API Testing & Mocking – API request validation, response verification, route mocking, network interception.
- 8. Customer Support – Contact form validations, newsletter subscription, support page validations, feedback forms.

Final Deliverables

- Project Testing Plan Document
- 120 Test Case Documentation
- Playwright Automation Scripts
- Test Data Files
- Bug Report / Defect Log
- Screenshots and Evidence Files
- Final Project Summary Report

Conclusion

- This project demonstrates end-to-end automation testing of an e-commerce platform using Playwright with JavaScript.
